Privacy policy

For the HushCut iPhone app. Effective 18 October 2026.

1. Who is responsible?

HushCut is provided by Bősze Krisztián Viktor. For privacy questions or requests, contact kraken.consultancy.mail@gmail.com.

2. Video and audio content

HushCut accesses the video you select so it can preview, reduce background noise and export a cleaned copy. Video, audio, thumbnails and editing settings are stored in the app's local project files. They are not uploaded to us or to a third-party AI service. We do not receive your media, transcripts, voiceprints or facial identification data. HushCut does not identify speakers or people.

3. Permissions and your choices

The system Photos picker passes only the video you select to HushCut. Adding an exported video to Photos requires your permission. Files you explicitly import or share into HushCut are copied into a local project. Saving or sharing an export happens only when you choose the destination. You may change Photos permissions in iOS Settings.

4. Retention and deletion of projects

Your projects remain in the app until you delete them or uninstall HushCut. Deleting a project removes its local working files. It does not delete the source video or copies that you saved to Photos, Files or another app. Manage those copies in the app or location where you saved them. Temporary processing files are removed as part of normal cleanup; interrupted work may leave temporary files until later cleanup or app removal.

5. Tracking, analytics and purchases

The app contains no advertising, tracking SDK or developer analytics service. No HushCut account is required. Apple handles the upfront App Store purchase under its own terms and privacy policy. We do not receive payment card details. Apple may provide store reporting and, depending on your Apple settings, diagnostic information through its own services.

6. Support messages

If you contact kraken.consultancy.mail@gmail.com, we receive the email address, message and attachments you choose to send. Send only information needed to explain the problem; a private video is not required for routine support. We use messages to answer requests, troubleshoot and meet applicable legal obligations. They are retained only as needed for those purposes and any required legal retention. Support email is handled through Gmail and its service infrastructure. We do not sell support messages or use them for advertising.

7. Viewing public documents

These public PDF documents are hosted on Supabase. Opening a PDF makes an ordinary web request, which can disclose an IP address, browser information and request time to the hosting and delivery providers. This is separate from video processing in HushCut; no video is attached to the document request. Hosting and email providers may process information internationally under their own service arrangements. See Supabase Privacy Policy and Google Privacy Policy.

8. Your rights and contact

Where applicable law provides them, you may request access, correction, deletion or restriction of personal information we hold in support correspondence, object to certain processing, or request portability. Contact kraken.consultancy.mail@gmail.com. We may ask for information needed to verify a request. We cannot remotely access or delete local projects on your iPhone. You may also contact the competent data protection authority; in Hungary this is NAIH (naih.hu).

9. Changes

If the app’s data practices change, this policy will be updated with a new effective date. This policy describes HushCut; another application you choose for sharing has its own privacy practices.
